EMBALMER'S REPORT

Eleanor Morgan — Sample Report · Case 1000

EmbalmPro

Decedent and death

Decedent name
Eleanor Morgan — Sample Report

Gender
Female

Age
76

Race
White

Hispanic Origin
Not Hispanic or Latino

Date of death
10/06/2026

Place of death
Willow Creek Medical Center

Facility and preparation

Facility name
Willow Creek Funeral Care

Embalmer name
Alex Bennett

Date of embalming
10/08/2026

Embalming start / finish time
9:15 AM – 11:30 AM

Body weight
200 lb

Body type
Average

Condition / case type summary
Non-autopsied adult remains. Mild facial dehydration, localized abdominal discoloration and dependent lividity noted. No generalized edema observed.

Fluids and solution

Arterial fluid used
20-index arterial fluid: 51.2 fl oz concentrate

Co-injection
None used

Cavity chemical
Cavity fluid: 16 fl oz

Disinfectant
Preparation-room surface disinfectant; used according to product labeling

Solution / calculation details
Arterial mixture: 51.2 fl oz of 20-index concentrate; water added to a final volume of 4 US gallons. Recorded dilution: 2.0%. No co-injection additive used.

Technique

Mouth closure
Muscular suture; lips positioned in natural closure

Eye closure
Eye caps; eyelids positioned in natural closure

Arteries injected
Right common carotid artery

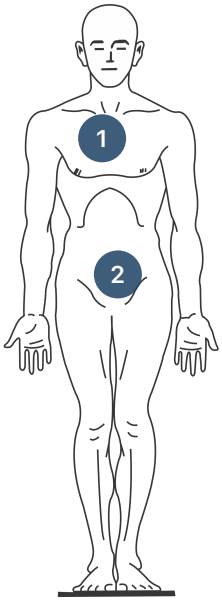

Veins drained
Right internal jugular vein

Drainage method
Intermittent drainage

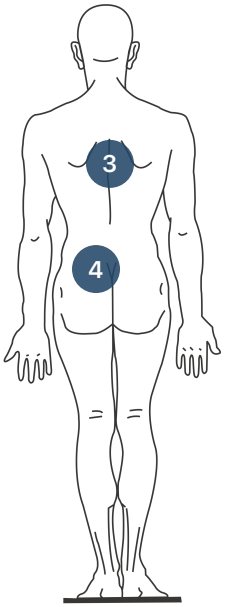

Aspiration
Thoracic and abdominal cavities aspirated; cavity treatment documented

Body observations

Body — front

Body — back

Front observations

1. Observation

Superficial abrasion of the left anterior shoulder, approximately 1 cm. No active drainage observed.

2. Observation

Localized green discoloration of the lower abdominal skin; skin surface intact.

Back observations

3. Observation

Dependent lividity over the interscapular region. No open skin lesions observed in this area.

4. Observation

Decubitus ulcer (pressure ulcer) of the lower back, approximately 2 cm, with an open skin defect. Depth and stage not documented.

Previously recorded description

Received supine with identification present. Mild facial dehydration with a shoulder abrasion and a localized lower-back pressure injury. Numbered front and back observations document localized findings.

Completion and notes

Condition after embalming

Arterial distribution and tissue firmness assessed at completion. Facial features remained in position. Left shoulder abrasion was dry; no leakage observed at closure sites. Localized abdominal discoloration remained visible.

Embalmer notes

Identity checked against the accompanying identification and case documentation. Personal effects inventoried separately. Preparation completed and the remains placed under facility care. This is a fictional demonstration report; names, observations and preparation details do not describe an actual decedent.
